

Quiz 15: Debugging!

1. You've written the following code:

```
myArray = [3, 5, 7, 3, 2]
for i in range(len(myArray)+1):
    print myArray[i]
```

Your code returns the error: `IndexError: list index out of range`

Correct the problem that is causing this error so that the output is:

```
3
5
7
3
2
```

2. You've written the following code:

```
def triple(num):
    num = num * 3

n = raw_input("Enter a number. ")
print triple(n)
```

When you run this code, it prints `None`, but you thought it would print the user's number multiplied by 3. What did you do wrong? Fix the code to print the user's number tripled.
